

COULOIR

Men's

Women's

When breaking trail is on your agenda be sure to grab your Couloir series snowshoes to help you get the job done. Designed to conquer any terrain, the Couloir series features the all new ultra aggressive Anaconda™ toe crampon, super tough ArcTec+™ decking, and the comfortable and secure ActiveFit™ binding. Tubbs knows that efficiency matters on long backcountry treks, so the Couloir has been designed with the Momentum Superlite 6000 frame, a sleek tapered tail for optimal medial clearance, and the innovative RII Revolution Response pivot system for all-terrain responsiveness.

FLOTATION

Durable and lightweight Momentum Superlite 6000 aluminum frame is maneuverable, and gender specific frame shapes accommodate men's and women's specific gaits. Proprietary ArcTec+™ decking is puncture and abrasion resistant to -40°F.

ARTICULATION

Energy efficient and effective, RII delivers shock absorbing lateral flex and quick side slope responsiveness to maintain a natural foot position in all conditions. Full step rotation allows the tail of the snowshoe to drop, shedding snow and allowing the toe crampon to bite deeply.

CONTROL

Gender specific, asymmetric ActiveFit™ binding featuring patented Control Wings™ provides the perfect combination of control, support, comfort and ease of use. Men's binding fits up to size 13 boots; women's sized for 5-11 boots. ActiveLift™ heel lift reduces calf fatigue on steep ascents.

TRACTION

All new and ultra aggressive, the carbon steel Anaconda™ toe crampon has eight sharp teeth that provide constant contact and penetration in all types of snow. Razor-sharp Python™ heel crampon delivers additional weighted traction under the heel.

TRADITIONAL SERIES

Nothing makes you want to strap 'em on and hit the snow like waking up to a foot of fresh powder. Whether your snowshoe tour is an hour or a full day, you are likely to encounter a variety of snow conditions along the way. From packed trails to deep powder, Tubbs' Traditional snowshoes offer the best versatility for your day on snow. With the balanced flotation found in Tubbs' Traditional snowshoes, you can walk or hike through snow covered forests and Alpine meadows.

Tubbs' Traditional snowshoes, with tubular frames and tensioned decking, can handle a variety of snow conditions, from icy traverses with the Mountaineer, to packed trails and powder with the Frontier. Traditional Series snowshoes come in multiple lengths to offer balanced flotation matched to the user's weight. Proven Tubbs' technologies such as the RII Revolution Response suspension system and ergonomic Fit-Step™ frames can only be found in Tubbs Traditional Series snowshoes.

FLOTATION

From our featherweight Momentum SuperLite 7000 frame on the Mountaineer to the rugged and durable Western frame on the Frontier, Tubbs makes sure you have the right frame shape and frame size for your adventure. Tubbs' specially designed Fit-Step™ frame, featured in our Day Hiking category, has an ergonomically designed upturned tail that has been proven to reduce muscular skeletal impact by 10%.

ARTICULATION

RII Revolution Response, found in our Backcountry and Day Hiking categories, delivers shock absorbing lateral flex and side slope responsiveness for a natural foot position in all conditions. The Rotating Toe Cord, found in our Trail Walking category, enables the tail of the snowshoe to drop, creating zero resistance and minimizing fatigue.

CONTROL

At Tubbs the binding is the heart of the snowshoe, and designs are constantly evolving to improve stability, control and comfort. Our 3D Fit platform, proprietary Control Wing™ design, and differentiated binding assortment eliminate sloppy movement and painful pressure points. Tubbs' broad collection of women's specific bindings accommodates women's boot shapes and sizes.

TRACTION

Whether it's the all new razor sharp 8-point Anaconda™ crampon on the Couloir or the safe yet solid recreational crampon on the Flurry, Tubbs takes the intended adventure into mind when designing the traction system for the Traditional Series snowshoes. Penetrating toe traction and weighted heel traction provide the right amount of security for different types of terrain and snow conditions.

Men's Couloir

♀ WOMEN'S SPECIFIC DESIGN

Lighter weight and narrower waisted, Tubbs women's frame geometry facilitates a woman's unique biomechanics and stride. Designed to specifically accommodate a woman's boot shape and size, Tubbs' broad collection of women's bindings eliminate sloppy movement and painful pressure points.
