

# VELOCITY

Did you know that you can burn more calories snowshoeing than you can walking, running or cross country skiing at the same pace? The perfect way to stay in shape in the winter, snowshoeing provides cross training adventures, marathon runners or casual joggers a great alternative to an indoor workout. Tubbs Velocity is a gender-neutral, lightweight, easy-to-use snowshoe great for packed-trail running and walking. Coming in at just 22" long, its slim and sleek design provides the efficiency needed to keep moving forward.

- The ultra durable 6000 series frame will stand up to vigorous use on the trails. The unique, streamlined Velocity frame shape maximizes efficiency and maneuverability, allowing you to run farther and more easily. TriTec™ decking is a triple-layer coated fabric that is durable and maintenance-free.
- The Fixed Toe Cord pivot system is efficient for flat and rolling terrain with packed snow conditions, and it keeps the snowshoe close to the foot for quick turnover.
- The intuitive and fully adjustable Aerobic Binding fits everything from women's running shoes to men's winter boots, with no pressure points. Toe stoppers prevent forward slippage of your footwear while running.
- Carbon steel dual toe crampons provide knife-like traction on toe thrust while biting heel crampons secure heel strike.
