

# WHITEOUT!

A specialty snowshoe for use in the backcountry—ideal for applications where camouflage is desired. Powder-coated white frame and white ArcTec Plus™ decking. Black ActiveFit™ binding integrates well with dark winter boots. Designed to meet U.S. Military/NATO parameters.

#### MOMENTUM SUPERLITE 6000

- Durable, lightweight 6061 aluminum frame with 'flat' nose rise to maximize flotation per sq. in.
- Tapered tail for optimal medial clearance and stability in steep pitches, powder snow and wind-packed terrain.
- Proprietary ArcTec+™ decking is strong, and puncture and abrasion resistant to -40° F, and has a low carbon footprint.

#### ROTATING TOE CORD

- Three planes of rotation optimize stability, control and comfort in all types of terrain and enable crampons to penetrate deeply for secure traction.
- The most energy efficient pivot system whether hiking in deep snow or steep slopes, independent research findings demonstrate a 7% reduction in cardio-respiratory strain and energy expenditure.

#### ACTIVEFIT™ BINDING ACTIVELIFT™ HEEL LIFT

- Bindings feature innovative "3D Fit" for control, support, and ease of use. Custom fits most men's boots.
- Stable base construction, with patented Control Wing™ design, centers the heel. Dual pivot points at the toe and padded midfoot eliminate pressure points.
- Asymmetric (L/R) bindings. Cinch Pull for easy entry/exit. Set and forget heel strap.
- ActiveLift™ reduces calf fatigue on ascents.

#### VIPER™/PYTHON™ CRAMPONS

- Stainless steel ultra long teeth located under the ball of the foot, provide maximum traction on ascent and descent.
- Razor-sharp climbing, traversing and braking teeth ensure stability on ice and hard pack.
- Aggressive Python heel crampon delivers 'weighted' traction.
